I urge you to adopt Alternative A, the "No Action" alternative, because it would maintain protection for the entire Teshekpuk Lake Surface Protection Area. This extraordinary ecosystem provides critical habitat for molting geese and nesting habitat for Steller's eiders, northern pintails, yellow-billed loons and other species. It also supports a vitally important caribou herd that Alaska natives depend on for their subsistence.

Eighty-seven percent of the northeastern reserve is already open to oil and gas companies for leasing. In the five years since the original 1998 northeast plan, additional information and analyses have been accumulated that point toward significant impacts on fish and wildlife if more of this sensitive area is opened. It would be a huge mistake to risk the internationally significant ecological resources of Teshekpuk Lake for a short-term supply of energy, especially when we know that the United States cannot drill its way to energy independence.

Again, I urge you to choose Alternative A, the "No Action" alternative, to protect the reserve's irreplaceable wildlife, wilderness and subsistence values for future generations.
